Subject: ISOC Newsletter

Dear Mr. Jerman-Blazic,

As you may know, the Internet Society will come into existence
at the beginning of 1992 to serve as an umbrella for the global
Internet community. In addition to assuming sponsorship for
the Internet Activities Board, Engineering Task Force, Research
Task Force, and the Interational Networking Conference, the Society
will allow rapid sharing of information among those inside and
outside the Internet community on its vast range of activities
and developments throughout the world.

One of the prime means of sharing such information will occur
through its membership publication called

      Internet News: The Newsletter of the Internet Society

Internet News serves as the basic publication of the Internet
Society for short, timely information. It is a vehicle intended
for news-like items that are focussed on more than 150 specific
Internet sectors to portray very current developments.
Conceptually, the Newsletter aims to create a quarterly global
snapshot of Internet and its applications from every relevant
perspective.

Every sector will have one (or in some cases several) contributing
editors who are really knowledgeable about that sector. Collection
and editing of this information will be done through the network to
ensure it is efficient and timely shared. Printed versions of the
newsletter will be sent in the post a couple of weeks after the
editorial closing, and electronic copies will be archived on a
server.
----
* If we haven't already discussed this matter, would you be
* willing to serve as one of those contributing editors to the
* Newsletter dealing with (sector code and subject):
*
*   Network Scenarios & Experiences
*   012.54 Yugoslavia

* The committment would not be significant. We only need
* approximately 180 words on this subject, every 3 months.
* This is a purely professional, voluntary effort, but you
* will have a byline with your name.

* At your discretion, if something really significant needs
* to be conveyed in a somewhat longer contribution, submit
* longer text or provide references, especially mail or
* anonymous FTP addresses for additional information.
* Bear in mind that the Society's journal will provide a
* vehicle for longer, more thorough exploration of topics.

** The EDITORIAL DEADLINE FOR THE FIRST ISSUE is: 25 Nov 91 **

* Please send your text in plain ASCII to <isoc-pub@nri.reston.va.us>
* placing in the subject header the letter "N" followed by the
* Volume, Issue, and Sector, in the form N-[volume]-[issue]-[sector].
* For example,
                Subject: N-1-1-012.54

* If you feel that this is more than you can undertake, or are
* otherwise uninterested please send me a reply note. Information
* about a suitable alternative contributor

Please find enclosed the information about YUNAC

Updated
March 1992

Organization and management

YUNAC is the major networking organization on the teritory
of former Yugoslavia which was
set up in 1990 after two years of networking activities.
After the political events in Yugoslavia in 1991 YUNAC
reorganized itself as an international organization following
the example of NORDUNET.
Members of YUNAC are Universities,
Research Institutes from the Academic and Commercial world from
Slovenia, Croatia and Bosna and Herzegovina.
The network is managed by Management Committee elected by
the members of YUNAC Assembly. YUNAC is organized as limited company.
YUNAC was national member of RARE, the European Association
of Research Networks and now is changing its status to international
membership.

Infrastructure

YUNAC uses as communication infrastructure leased lines (mainly
9.6 Kbits and some 48 Kbps) and PPSDN (Public Packet Switched Data
Network). This infrastructure is used for multiprotocol services:
DECnet (Phase IV), X.400 and NJE. All YUNAC nodes with X.400
services provide gateway services for e-mail to the DECNET
nodes. Some TCP/IP activity is also present.
The number of connected hosts is cca 400. The number of local
area networks Ethernet and TCP/IP based connected to the YUNAC
hosts is growing every day.

YUNAC is connected via leased 64 Kbps line to the International
X.25 Infrastructure run by RARE and COSINE. The switch and WEP
is located in the YUNAC headquaters.

Services

The services offered to the end users are: electronic
mail, computer conferencing, transfer of data, directory
services, remote login, and connection to the international
networks EARN/BITNET, EUNET/USENET, Internet via gateways.

Recently YUNAC-net was granted access to Internet via EASInet
GW in CERN.
Regular information service connecting yugoslav users
abroad to the domestic source of information via e-mail
and distribution lists is also working quite well.

Dial up services are offered at NMC on the following numbers:

+38 61   161-040   (6 lines,   2400,8,n,1, MNP 5, V42/bis)
+38 61   151-156   (1 lines,   14400,8,n,1, MNP 5, V42/bis, V32/bis
DON' T FORGET TO SEND BREAK WHEN MODEMS ESTABLISH CONNECTION
Username: SETHOST
Enter node name:KRPAN

YUNAC is running DNS for TLD .YU on klepec.yunac.yu (IP address:
153.5.1.1).

Addressing

All computers on YUNAC with X.400 facilities use
X.400 address with an appropriate Internet-style domain addresses
maping i.e :

X.400:   s=user;o=institution;p=ac;a=mail;c=yu
Internet: user@institution.yu
Decnet: user@host
EARN: user@host

Future plans:

YUNAC plan to offer very soon an anonymous FTP, FTAM and NEWS service.
